

What should be done*

General description:

Theme: Project management/profiles dashboard - a service to create, update, share, and delete projects information (details, attached documents)

Stack:

Python 3.12+

FastAPI

PostgreSQL + Optional ORM (SQLAlchemy, etc)

Docker

AWSS3 (file storage)

AWS Lambda functions (for image processing , size calculations on s3 event)

CI/CD: GitHub Actions/Gitlab CI (testing/linting/building/pushing to registry/deploy to cloud on merge request)
